ANNA-MARIE EDELEANU

Technical Consultant

System analysis & design · Backend engineering

anna.edeleanu@gmail.com · LinkedIn · Portfolio

Open to remote work in Australian and NZ time zones · UK and EU working rights

PROFILE

Technical consultant with a background in backend software engineering at Starling Bank and Lloyds Banking Group, and an MEng in Mechanical Engineering. I work out how complex systems really work, covering both the technology and the people who rely on it, and turn that into clear designs, documentation and decisions. Experienced in API and domain design, data and metrics design, fraud and banking systems, and bridging technical teams, business stakeholders and founders.

SKILLS

Analysis & design: stakeholder discovery, system and data-flow mapping, data and metrics design, API and domain design, product and technical roadmaps, process improvement, technical documentation

Data: end-to-end data design from capture to storage to display, statistical aggregation, scalable data structures, SQL

Engineering: Java (advanced), Spring, Guice, PostgreSQL, REST APIs, JUnit, Mockito, contract testing, Docker, Kubernetes, AWS, CI/CD, Grafana, Sentry, Instana, Prometheus. Familiar with Python, TypeScript, JavaScript, React

Tools: Jira, Confluence, Notion, Attio (CRM), Figma, GitHub · **AI:** ChatGPT, Claude, GitHub Copilot

EXPERIENCE

Technical Consultant (contract, part-time) Sep – Oct 2026

Take In, Auckland · Wearable health-tech startup

- Brought in at a key stage of product development to give the founders an independent technical perspective as they bring their wearable to life.
- Conducted a full project review across the cloud backend, mobile app, firmware, hardware testing and data tooling, delivered as a 46-page report aligning the technical plan with the company's wider strategy.
- Led the end-to-end design of the product's breath metrics, from sensor capture through storage and statistical aggregation to what users see in the app.
- Built the founders' understanding of their technology through walkthroughs, system and data-flow diagrams, a glossary and analogies, so they could lead technical decisions with confidence.
- Listened first, then translated shifting priorities into clear technical trade-offs: what each change would cost in time and effort, and what to solve now versus later.
- Brought design and engineering together, including a redesign of the app's screens, so the vision and the build work from the same picture.

Systems & Operations Analyst (freelance, part-time) Aug 2026 – present

Lyra, Sydney (remote)

- Reviewed the team's Notion structure and workflows so information stayed clear and easy to find in a fast-changing startup, without duplication or extra documentation overhead.
- Set up and implemented Attio CRM from scratch, designing the deals pipeline and process structure and connecting it with email and contacts.
- Identified ways to free up founder time in customer-facing work, such as onboarding videos, and mapped which tasks could be handed to others, and when.

Operations, Community & Customer Roles, New Zealand 2023 – 2026

Tourism operations, customer service, sport and community events, early childhood education and hospitality

- ***Wild Kiwi*** *(sales & operations)*: introduced AI tools and workflow improvements in a small tourism business to cut manual admin. Tested and trained a customer-facing **AI chatbot** across several versions.

- Documented processes and unwritten team knowledge as onboarding guides, so new staff could work independently.
- ***Hunger Ball*** *(sports facilitator):* ran 20+ sports events for schools (up to 50 students), communities and private groups, adapting activities for accessibility and for students with disabilities.
- Worked with the team to improve manual training, scheduling and booking processes for a nationwide network of facilitators.
- ***Early childhood education*** *(Gems and Happy Hearts):* built calm, clear communication with children, families and teams, adapting quickly to each child's needs in fast-paced settings.

Software Engineer
Mar 2021 – Sep 2023

Starling Bank, London · UK digital bank serving 3.6 million customers

- **Banking-as-a-Service:** designed and built external APIs for onboarding partner clients, working directly with clients and with product and compliance teams to shape requirements.
- Scoped and designed the API template for the bank's SaaS offering. Gathered requirements across teams and designed a flexible domain model covering core banking functions, account structures and international addresses.
- **Financial crime:** led the redesign of the fraud rules engine for a platform processing £143B in annual transaction volume, adding dynamic, configurable rules and thresholds so the fraud team could respond quickly to emerging threats.
- Worked with fraud investigators and customer service teams to build internal tools and actions around their day-to-day work, including holds on suspicious accounts.
- Wrote onboarding guides to help new engineers become independent sooner.

Software Engineer
Jul 2019 – Oct 2020

Lloyds Banking Group, London · One of the UK's Big Four banks

- Completed FDM's intensive Java development programme before placement at Lloyds.
- Developed fraud detection microservices in a team of 8 engineers and integrated them with the existing monolithic system (Java, Spring).
- Built a switch service and a reusable data-mapping tool that cut repetitive manual format-translation work for engineers.

Earlier experience
2018

- **Graduate Intern, General Dynamics Land Systems:** designed an adjustable pressure valve and contributed to technical documentation.
- **University of Auckland:** remote participant in a reinforcement-learning research project.

EDUCATION

MEng Mechanical Engineering, 2:1
2014 – 2018

Cardiff University

- Led the final-year project on an autonomous LEGO mini-factory; modules included object-oriented programming, robotics and commercialising innovation.

A-levels: Maths (A*), Chemistry (A), Further Maths (B), Physics (B) · *King's School Canterbury*

COMMUNITY & INTERESTS

- **Community:** founder of the Lloyds Wellbeing Hub; co-chair of Starling's Race & Ethnicity Network. Volunteered with the Drive Forward Foundation (helping young people in care into work), at a dementia clinic, a turtle sanctuary in Costa Rica and teaching in India.
- **Curious about:** psychology, behaviour and how people really interact with technology.
- **Outdoors & making:** ultra-marathon runner and advanced scuba diver; enjoys pottery, knitting and painting.
